### **Don't Subtract, Add**

We are learning that problems like  $34 + \square = 51$   
and  $51 - 43 = \square$  have the same answers.

Use the method you used in Jumping the Number line to help you solve these problems.

1. Jill has \$73 and she spends \$28. How much money does she have left?
2. Moana has \$81 and she gives her friend \$18. How much money does Moana have left?
3. Jake collected \$75 from his pocket money to buy a present for his mum. The present only costs \$39 so how much change does he have?
4. Dad takes \$93 with him to the fair. He comes back with \$57. How much did he spend?
5. At the park the lolly seller has collected in \$103. She has to pay \$88 out for buying lollies for the next day. How much money does she have left?
6. Sam has \$110 and spends \$89 on some play station games he wanted. How much money does he have left?
7. I start shopping with \$64 and come home with \$38. How much did I spend when I was out shopping?
8. I wanted to collect \$100 for charity, but only managed to get \$82. How much less than \$100 is that?
