91	92	93	94	95	96	97	98	99	100

Play this game with a partner. You will need a coloured pencil each and two dice.

Take turns to roll the dice and use the scores to make a 2 digit number. You can decide which order to use the digits, e.g. if you throw a 2 and a 5 you can choose 25 or 52.

What number do you need to add to make 100? Colour this number on the 100 square. If this number is already coloured, miss a go. Who has the most coloured squares at the end?
