

Match the decorations to total the number on the pot

Match the decorations to total the number on the pot

Match the decorations to total the number on the pot

What to do.

On either of the master sheets, write a number in the pot. On the decorations write three pairs of numbers that total the number in the pot.

Do the same for all the trees (different totals, of course).

The children have to colour the pairs the same colour. (e.g. if the total is 6, 2 and 4 could be red, three and three could be blue, etc).

Extension: Use higher total numbers or have three numbers to reach the total, rather than two.
