

## Experiment to test which objects are magnetic.

1. What exactly did I want to find out?

I wanted to find out which objects were \_\_\_\_\_ and which were \_\_\_\_\_ magnetic.

2. What did I use?

3. What did I actually do?

I used a \_\_\_\_\_ and tried to \_\_\_\_\_ objects to it. If they stuck the \_\_\_\_\_ were magnetic. If the objects did not stick they were not \_\_\_\_\_.

4. What did I think would happen?

See Table of Results.

5. What actually happened?

See table of results.

6. What have I found out?

If an object is magnetic it must be made of \_\_\_\_\_. Not all objects that are metal are \_\_\_\_\_. If an object is not made of metal it will \_\_\_\_\_ be magnetic.
